What Parents and Carers Need to Know about Microtransactions

Carly Page

Experienced technology journalist

Guide

This free online safety guide looks at microtransactions – those in-app or in-game purchases which can tempt young users into regular online spending.

[DOWNLOAD PDF](#)[DOWNLOAD JPG](#)Guide complete [View my learning record](#)

What Parents & Carers Need to Know about MICROTRANSACTIONS

Microtransactions (often abbreviated as "MTX") are digital purchases made within an app or game to unlock extra features or additional content such as new levels. A popular sub-set of these are loot boxes, which contain a selection (usually random) of virtual items from character skins to game-changing equipment like better weapons. Microtransactions (and loot boxes in particular) are now widespread in apps and games, but concerns persist that they normalise gambling and can foster addictive behaviours – especially among younger players.

WHAT ARE THE RISKS?

GATEWAY TO GAMBLING?

Microtransactions have been criticised for promoting gambling-adjacent behaviour in children. Research has also suggested that exposure to the loot box system could affect the behaviour of a young person suffering gambling harms later in life. Children who purchased or used loot boxes in the last 12 months were found to be more likely to have gambled during the same period, as well.

ADDICTIVE NATURE

Microtransactions (and loot boxes especially) could lead to young people displaying compulsive behaviours. Loot boxes are designed to be addictive, and the rewards/prizes they contain are dispensed at random. This means that young gamers might not get what they want straight away, causing them to spend more money as well as additional time gaming.

PAYING TO WIN

In many popular games (the FIFA series being a notable example), microtransactions make it far easier to succeed – which is difficult because children can often find it difficult to keep track of their spending. Once a child starts making in-game purchases, they may continue buying to keep up with their friends and other players, sometimes without recognising the mounting real-world cost.

EXCLUSIVE CONTENT

DATA COLLECTION

To allow a young person to complete microtransactions, many apps and game developers collect personal data such as their name, address, email, geolocation information, photos, payment details and so on. Even if this data remains secure (which is by no means guaranteed), there's always the chance that it will be used – and possibly sold on to third parties – for marketing purposes.

AFFECTING DAILY ROUTINE

Online games tend to revolve around repeated loops of activity that can affect purchasing decisions and potentially influence children's spending patterns. This could lead to your child not only handling over more money but also altering their daily routine to match the game's schedule – potentially impacting more important elements of their day, such as homework and family time.

SATELLITE SPENDING

If you've linked a payment method like a debit card or PayPal account to your child's game or app, it's wise to keep a close eye on their microtransactions to ensure they aren't racking up a large bill, setting a child loose on access to your card (if they're still too young to have their own) or other means of payment could also lead to them spending beyond the apps and games they normally use.

Advice for Parents & Carers

DO YOUR RESEARCH

It's important to have a serviceable idea of whether the games your child plays use the loot box system (even if it goes by a different name) or include the option of buying items, equipment and so forth. If so, it's crucial to help your child understand that this costs actual money, and that they shouldn't feel pressured into making any purchases.

CHAT ABOUT 'CHANCE'

It may help to explain to your child that many microtransactions involve an element of chance: they could pay money and still not get what they want in return. Emphasise that – while not usually costing much individually – these in-app and in-game purchases can soon add up. Talk to your child about how spending their money in a game or app means they have less to use in the real world.

(GIFT) CARDS ON THE TABLE

Investing in an in-game currency gift card can be a useful way of helping your child get to grips with budgeting. However, if you do buy a Fortnite gift card, monitor how long it takes them to spend it. When the time comes to you cash, you could make it the starting point for a conversation about how quickly that money went and how they could earn their next gift card.

STOP SPENDING AT SOURCE

You might decide that the wisest strategy is to remove the potential for spending money on microtransactions. If so, most games, apps and devices have options in their settings to help you manage what your child can spend – or to disable that function altogether, preventing them from buying additional items for their games or boosted functionality for certain apps.

WATCH FOR THE SIGNS

If you're worried that your child's passion for a particular game or app may have tipped them into habitual spending, it's important to remember the indicators of addictive behaviour. Irritability, a lack of concentration and prioritising recreational screen time ahead of homework or mealtimes could all be signs that you need to have a conversation about a more balanced routine.
